Pete Positive
Man of Extinction

A Petri's Positive Pest Control Publication
dedicated to keeping our customers
informed about all aspects of pest control.

Residential and Commercial • Indoor & Perimeter Pest Control • Lawn and Ornamental Spraying & Fertilizing • Termite Control Solutions

Petri Designated Quality Pro Company

In March 2006, Petri qualified to become a Quality Pro Company, a designation awarded by the National Pest Management Association to a select group of pest control companies throughout the Country that are in the top echelon of the industry.

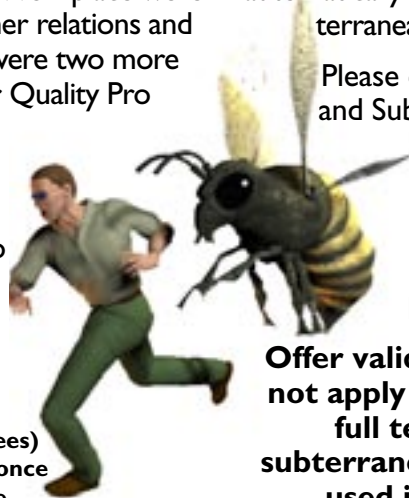

In order to become a Quality Pro Company Petri was required to meet strict qualification criteria including having all managers, service technicians, and sales representatives pass an exam with an 80% or better. This exam covered many important areas of pest control including safety and protection for the customer and the applicator, pest id and proper treatment practices, customer relations, and equipment maintenance. Additionally, Petri must maintain ongoing verifiable training. Hiring standards including criminal background and motor vehicle record checks and maintaining a Drug-Free Workplace were also a requirement. Consumer relations and environmental stewardship were two more areas that are considered for Quality Pro designation.

Petri is proud to maintain the highest standards in the pest control industry and to receive this distinct designation as a new member of Quality Pro.

Amazing Bug Facts

Africanized honey bees (killer bees) can chase people over 1/4 mile once they get excited or aggressive

Termite Season Has Arrived!

New technology from Petri makes
need for tenting less common

With the termite swarm season upon us Petri has invested in new technologies for treating Drywood termites that will make the need for tent fumigation less common. Although there will still be certain situations when tenting the entire building is the best option, the new technology provides for an effective alternative in those situations where termites can be located and infested wood can be treated directly.

The latest technology consists of an acoustical device which can pick up the sound of termites in walls and voids, a resistograph that confirms the existence of termite galleries (hollowed out wood) and measures how far in the galleries are, and advanced foaming and misting equipment. Improvements in the efficacy of termite products such as Termidor through BASF and Premise through Bayer also help greatly in treating for termites.

Petri also offers the best available treatment programs for Subterranean Termites including Termidor liquid treatments and the Sentricon Colony Elimination System used at the White House and Statue of Liberty. For prevention of termites, current pest control customers can add the TermaPest monitoring stations to their property and be automatically put under Petri's free treatment warranty should Subterranean termites be found.

Please call our office for further information on Drywood and Subterranean Termites and how you can protect your home or business.
